

ABSTRACT OF THE DISCLOSURE

Provided is a liquid-absorbent sheet for absorbing drips
oozing from a food. The liquid-absorbent sheet includes a
5 laminate of a liquid-pervious layer and an underlying
liquid-absorbing layer. The liquid-pervious layer has
through-holes that serve as liquid guides capable of passing
the drips therethrough, and the liquid-absorbing layer is
capable of absorbing the drips having passed through the
10 liquid-pervious layer. The contact angle of a drop of
physiological saline to the surface of the liquid-pervious
layer is at least 35°, and the electrostatic chargeability of
the liquid-absorbing layer is lower than that of the
liquid-pervious layer.
